

..triangles with raised centers.

... and a really big one.

Drawing by Mr. Marcel H. He and his wife saw red and green flashing lights toward the center of the triangle, three large white lights, and a white neon tube. SOBEPS archives

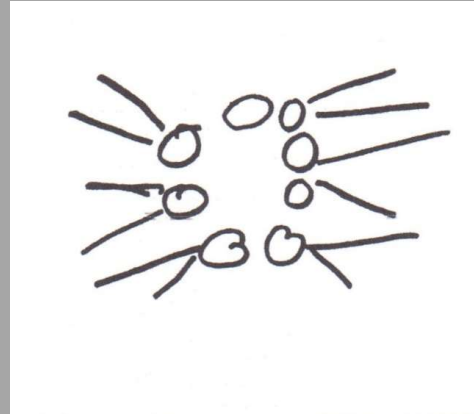

NOVEMBER 7, 1991, the Bonaventure Hilton Hotel
Richard F. Haines and Bernard Guenette

DETAILS SURROUNDING

A LARGE STATIONARY

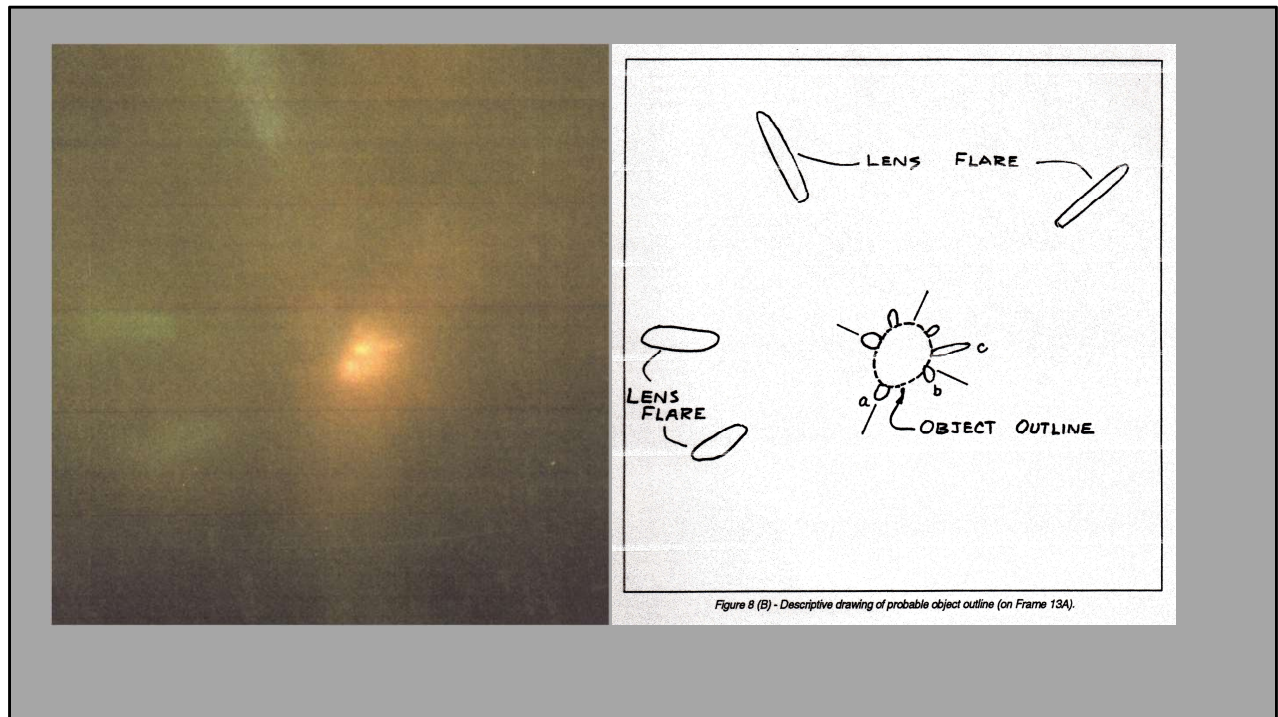

AERIAL OBJECT

ABOVE MONTREAL

Montreal's own sighting. Passersby, police officers, reported objet hovering over the Bonaventure Hilton Hotel. Careful analysis of the photos and the observer reports have not provided a conventional explanation for the object.

Robert Lamontagne, the St-Adolphe d'Howard debunker, called the photos reflections of the swimming pool lights from the heated pool atop the hotel.

I know both of the investigators. The photo analyses were carefully done, in great detail. The local details and witnesses have been followed up and the case is well documented.

Giant UFO in the Yukon Territory

Investigated by

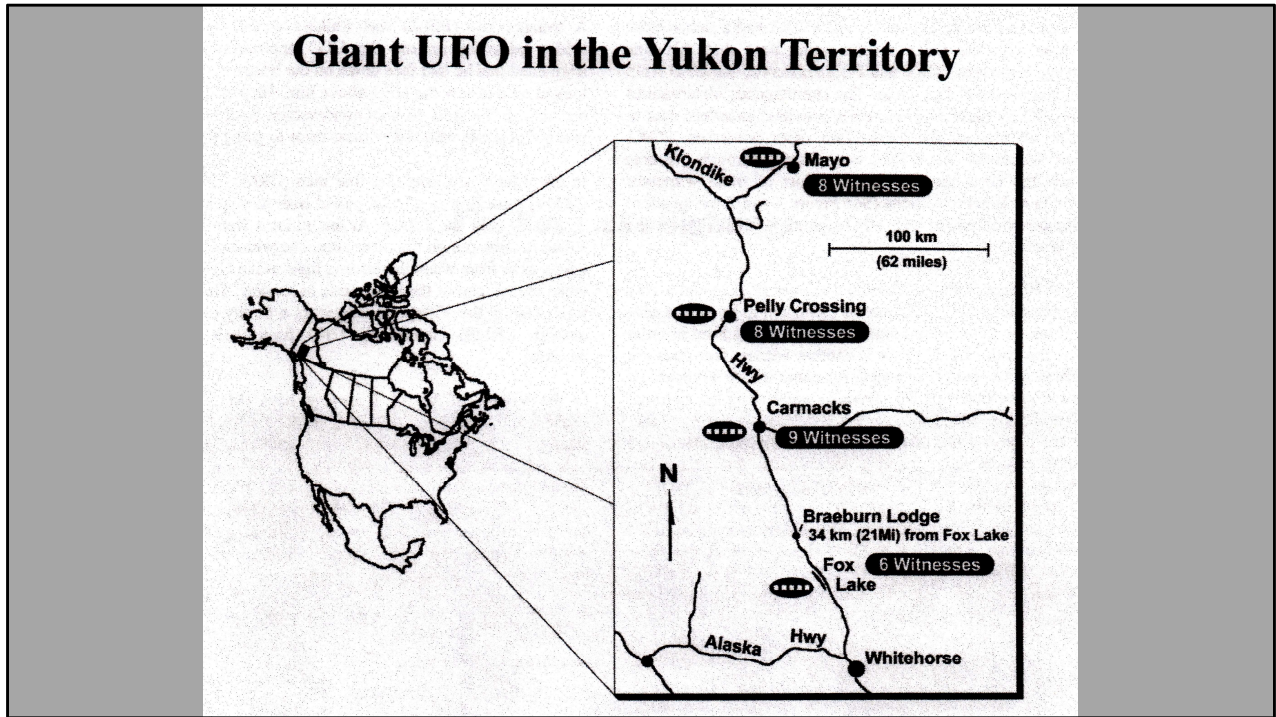

Martin Jasek, M.Sc., P.Eng.

On December 11, 1996, at least 31 people in the Yukon Territory of Canada witnessed a giant UFO. Indications are that it may have been the size of several football stadiums. The sightings principally took place in four locations in the central Yukon; Fox Lake, the Village of Carmacks, the Village of Pelly Crossing, and the Village of Mayo with 6, 9, 8 and 8 witnesses respectively.

..This is an exemplary report of an immensely large UFO seen by many people. I compare the Belgian sightings, in a small corner of a small country, with the Yukon sightings, in a very large corner of a very large country.

It is a great credit to Martin Jasek, the qualified amateur (almost everyone studying UFOs is an amateur) who followed up this sighting and wrote the comprehensive report.

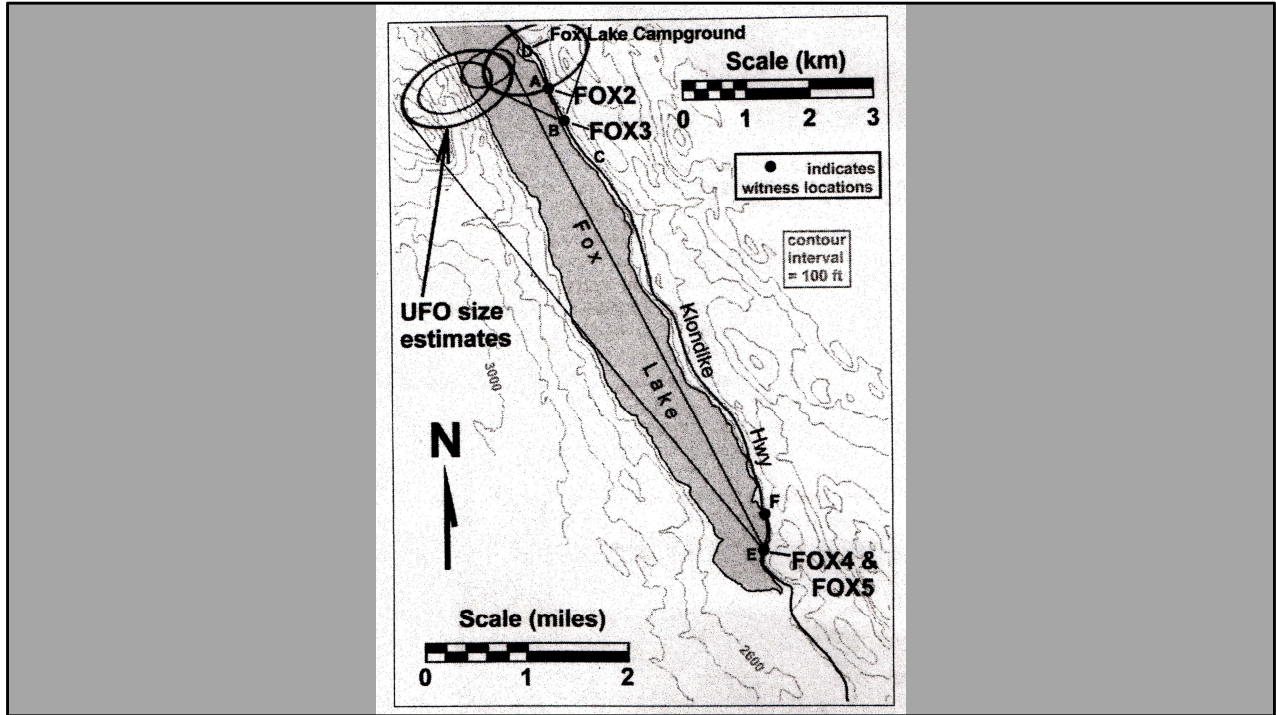

Giant UFO in the Yukon Territory

... a map of the sighting locations.

Fox lake, Yukon Territory.

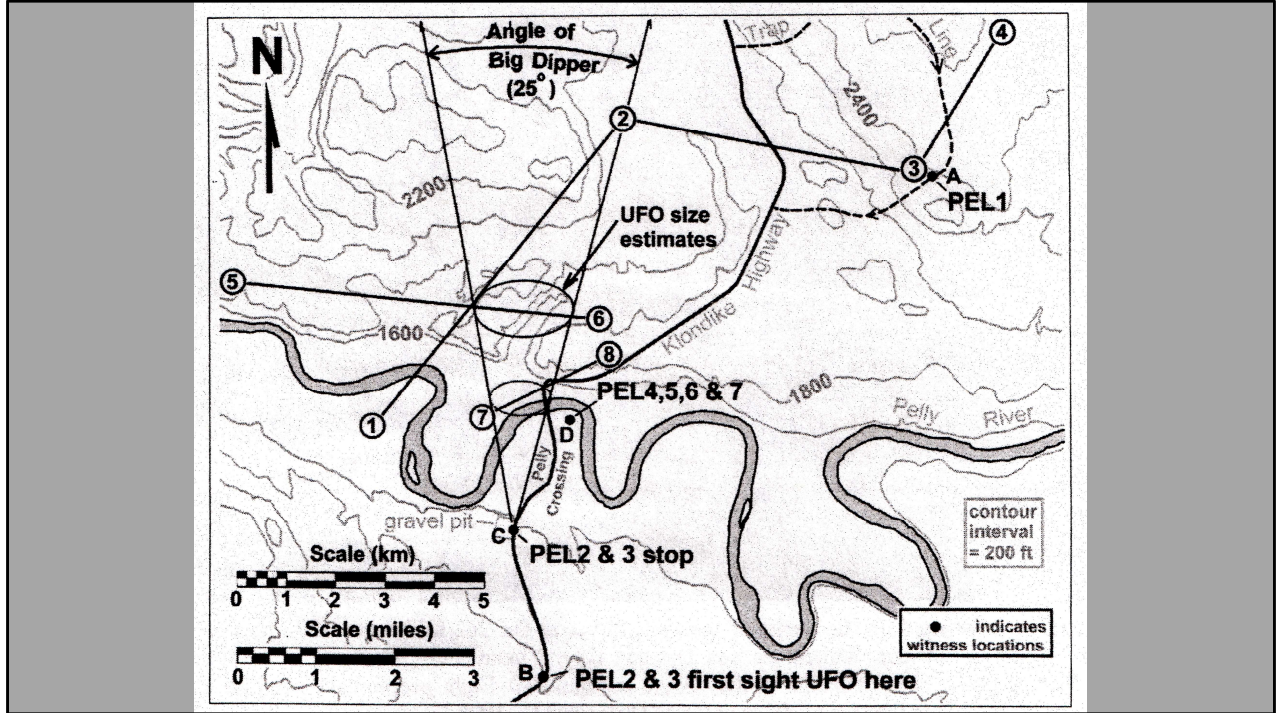

Some observers were at the end of Fox Lake, looking North.

Figure 34. FOX3 estimates the angular size of the UFO while on site at the UFO sighting location. The geometry between his eyes and the tip of his hands was measured and used to calculate the UFO size. His cousin (FOX2) was 570 metres (1870 ft) ahead of him during the UFO sighting and was directly underneath the edge of the UFO. This information was used to obtain a UFO size of 1.7 km (1.1 miles) in length.

Here is one of them.

...others were further north.

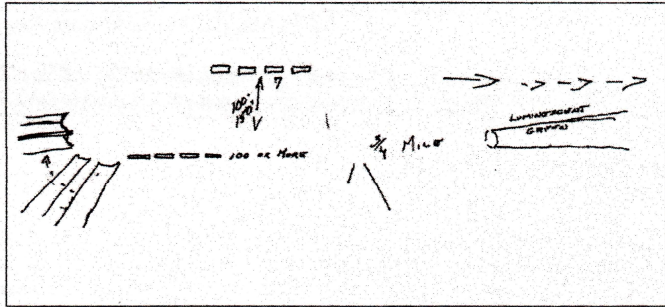

Figure 26. First drawing by Don Trudeau (UFO witness PEL1) depicting the UFO he sighted on December 11th, 1996.

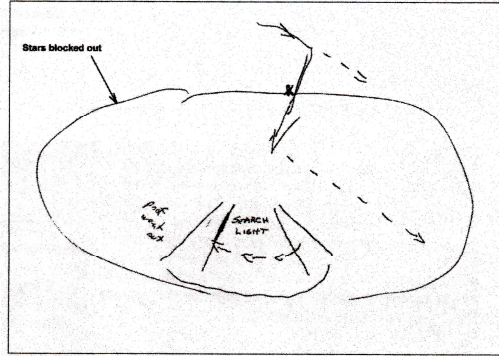

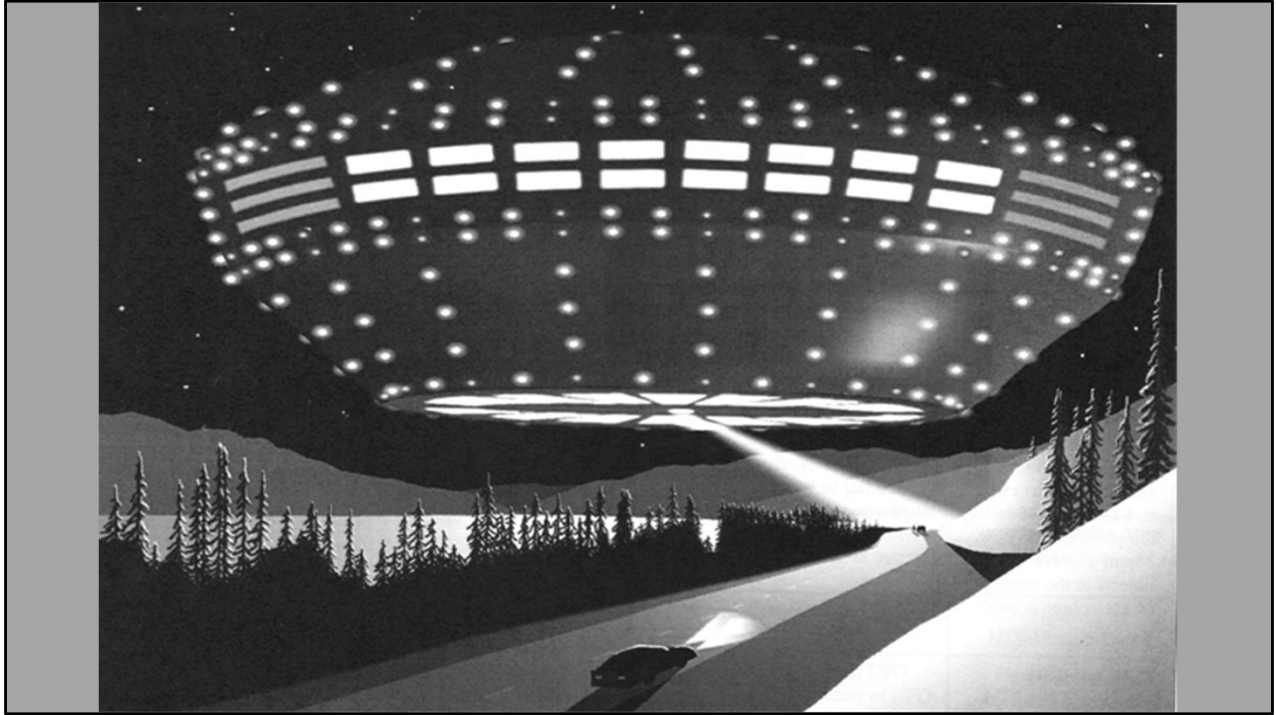

Figure 27. Second drawing by Don Trudeau (UFO witness PEL1) depicting the UFO he sighted on December 11th, 1996. The drawing is actually two drawings in one. The first shows how the UFO blocked out stars in the background as well as the motion of the search light, and the second is a plan (bird's-eye) view of the path of the UFO.

Witness' drawings.

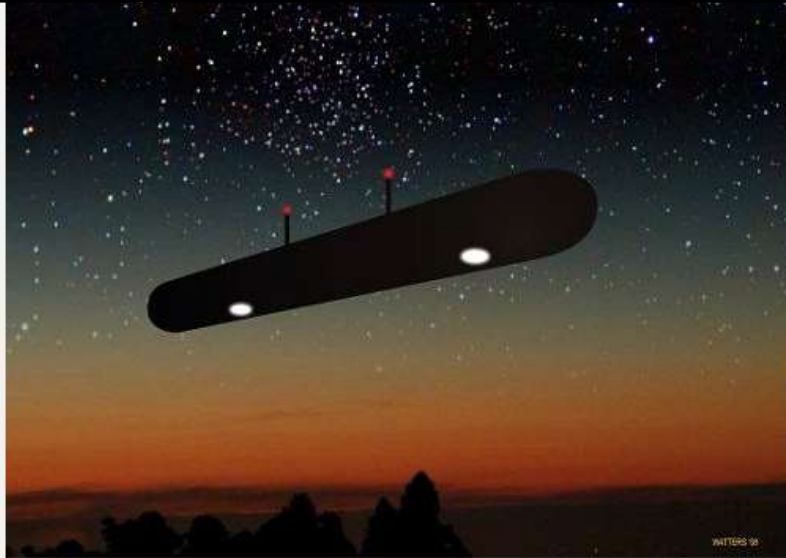

Martin Jasek interviewed over 30 witnesses, most of them independent, and got detailed reports from many of them. This is his computer-generated illustration of the low, big and slow UFO, as reconstructed from the individual witness reports.

The ET equivalent of a Carnival Cruise Line ship, looking in on the natives.

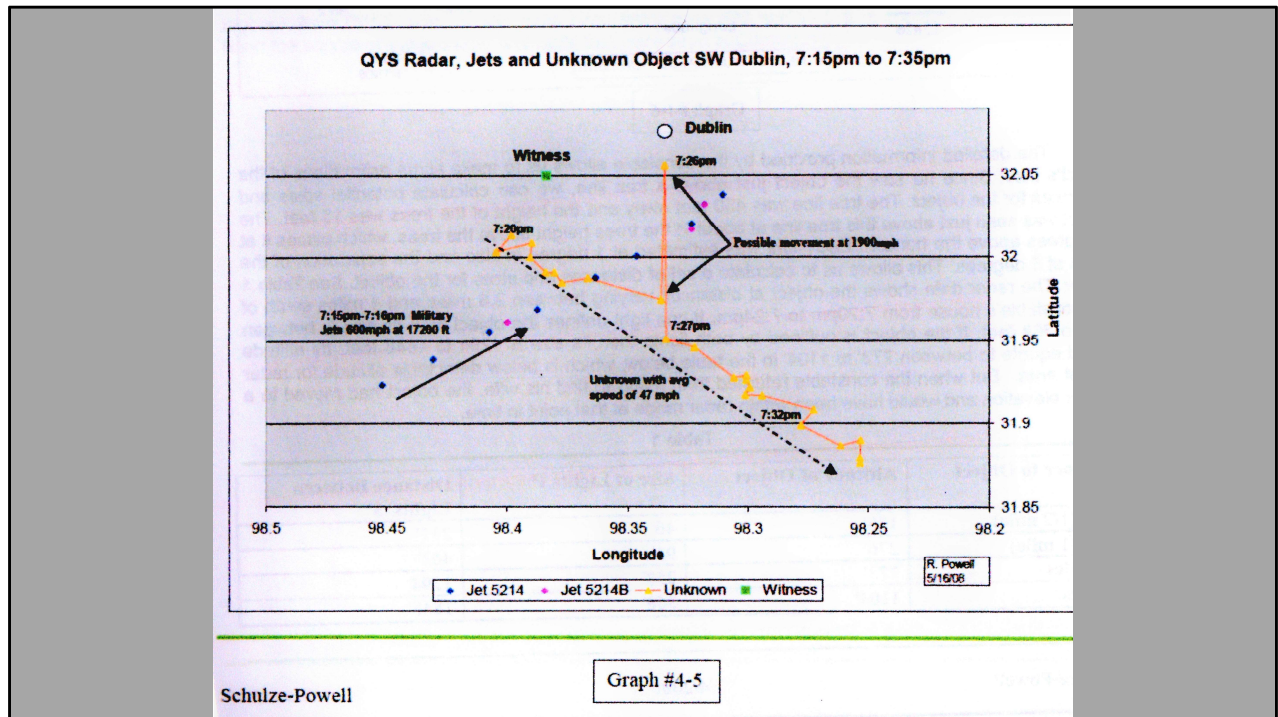

Special Research Report Stephenville, Texas

Another thoroughly studied low, big and slow case: the full report was prepared by Glen Schulze and Robert Powell of MUFON. They had access to FAA radar tapes, which they knew how to analyze. The USAF did not share radar with them, but they obtained civilian data through Freedom of Information requests.

Constable Lee Roy Gaitan reported that another police officer had seen a huge cigar-shaped aerial craft with two "antennas" topped by red lights moving slowly about 300 to 400 feet in the air near the Stephenville, Texas, courthouse. He described it as approximately two to three football fields long. Computer illustration(s) based on documented reports. © 2008 by Gregory Watters (This is an artistic rendition of the object at dusk for clarity. The police officer said he saw the object as a silhouette against the night sky.)

Again, an artists' conception drawn from witness reports.

Reconstruction of objet's flight path, along with flight paths of tracking aircraft. It loitered, sped, loitered and eventually sped away.

St-Adolphe d'Howard, January 14, 2014

Ovnis à Saint-Adolphe-d'Howard

Une dizaine d'objets volants dans le ciel

... Et puis, sur le coup de 18 heures ou presque comme promis, six appareils silencieux apparaissent à l'horizon, l'un après l'autre, à moins d'une minute d'intervalles.

Ils viennent tous de l'ouest et filent en direction est, sans aucun bruit. Aucun signe de leur présence à part quelques clignotants rouges et blancs qui se succèdent.

Mercredi 15 janvier 2014 06:26:44 HNE

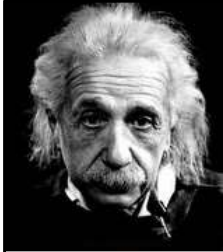

The St-Adolphe d'Howard sighting, already mentioned and relatively recent. Multiple witnesses, a photo, no explanation. I'm sorry I can't say whether there have been any recent sightings, but the older ones were frequent and widely observed – and photographed.

Les ovnis font courir les foules à Saint-Adolphe-d 'Howard

... also widely reported in French-language media;
not so in the English press.

Albert Einstein

“It is the theory which decides what can be observed.”

On the generalized theory of gravitation, 1950: Wikiquotes

As I have said before, the paradigmatic constraints of institutional science are so strong that observations totally outside of the reach of theory – either as support or as counter-example – are not even looked at by scientists. Witness Einstein’s quote, and Wilczek’s ignorance.

This set of data could have been presented to people on every continent, with different examples, but with the same final conclusions:

We are under surveillance by entities that know how to build machines that we cannot duplicate.

We cannot control the comings and goings of the entities or of the machines.

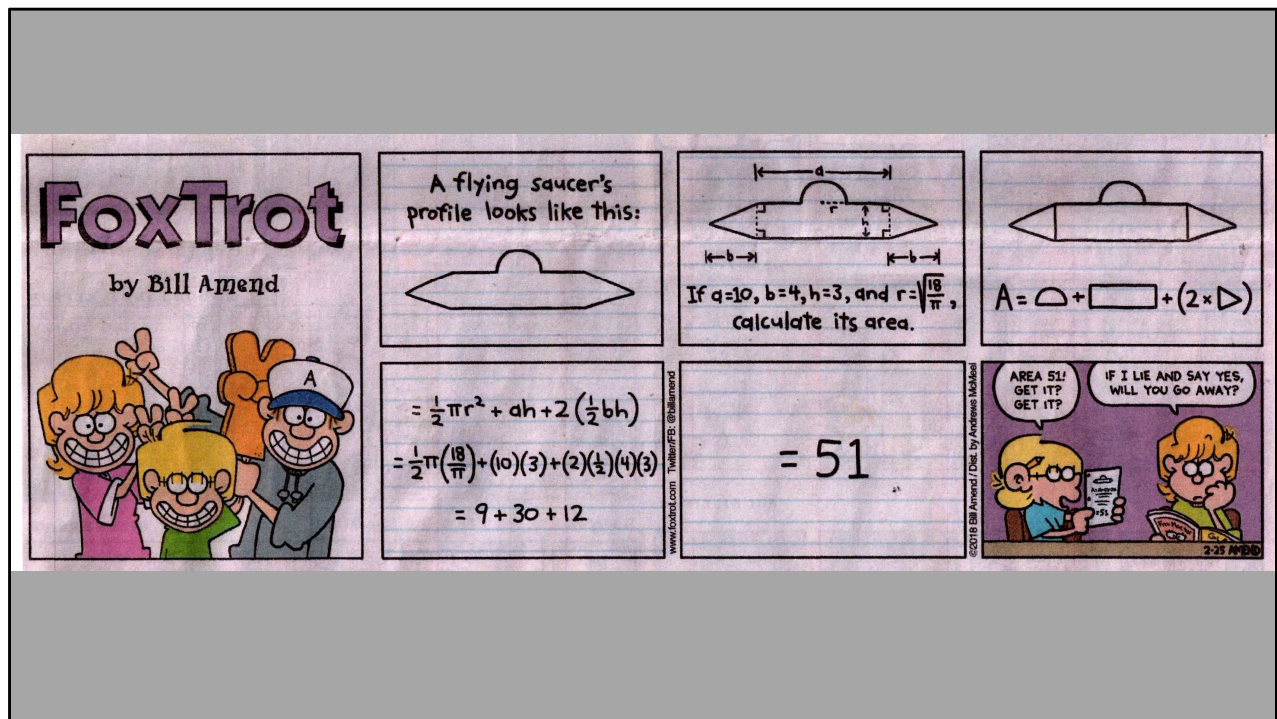

We private citizens do not know why they are here or where they come from.

This set of data could have been presented to people on every continent with different examples, but with the same conclusions:

We are under surveillance by entities that know how to build machines that we cannot duplicate.

We cannot control the comings and goings of the entities or of the machines.

We private citizens do know why they are here or where they come from.

And the gentle public reaction – epitomized by cartoonists’ treatments– is to make light of the concern, but not to scold. By joking, we manage to replace anxiety with humor, which is an easier attitude to adopt towards the whole problem. And as here, to just admit – we don’t understand it. That is easier than agreeing that:

1. Some UFOs are extraterrestrial vehicles.
2. Some of those ET vehicles have crews.
3. Some of those ET crews “catch and release” humans to study us.

..... Which is my conclusion, based on the evidence.
